

# YOUR STREET NEEDS YOU!

An invitation to be part of a proven and effective local approach to reduce both your and your community's contribution to climate change

Join your neighbours to make your homes warmer and healthier, and your street a future-friendly trailblazer that inspires others to take action

## As part of our NEW Street by Street project, Low Carbon West Oxford invites you to:

Work with those who live around you and help your street to make a difference

Learn from local experts and neighbours about how to stop your house leaking energy, stop wasting money and share your know-how

Gain access to grants, technical support/expertise and recommended suppliers

Let LCWO take you through a fully supported six-month journey that could change your street for the better

PLUS we'll provide a DELICIOUS banquet for those who stay the course!

## Participants will benefit from:

A visit to complete a carbon footprint of your household at the beginning and end of the project, enabling us to highlight changes you could make to reduce your carbon footprint and assess the impact of any changes you chose to make during the pilot

Two workshops looking at key areas including energy use in the home, food, waste and travel

A FREE visit from an energy assessor to provide tailored advice about making your home more energy and carbon efficient

Information about and help with accessing grants for improvements, and access to small grants from us, for a range of actions, including childcare to facilitate your involvement

Guidance on finding suppliers and the opportunity to link up with others for group bookings

As much or as little hand holding as you want from initial assessment to getting things DONE

You do not need to own your own house, have oodles of cash or spare time, to take part and make a difference, however you will need to commit some time to participate

This programme is for all residents of Binsey Lane, Duke Street and Harley Road and will be accessible to all

Celebrating 10 years of award-winning community-led action on climate change
